

Omni-HealthData™ Insights: Quality and Patient Safety

Information Management for Health Providers

Highlights

- Get a holistic view of care quality
- Improve HEDIS Score and Star Ratings
- Understand the root causes of issues
- Standardize the view of metrics for all users

The Quality and Patient Safety Insights App collects, unifies, and harmonizes data from a variety of internal and external sources, then presents it through a series of executive, departmental, and operational dashboards, featuring drill-through capabilities.

In hospitals across the U.S., 78 percent receive a readmit penalty,¹ 23 percent receive a Hospital-Acquired Condition (HAC) Reduction Program penalty,² and 40 percent are penalized under Value-Based Purchasing.³ Disparate and diverse information sources make it difficult for hospitals and networks to effectively monitor critical quality and safety indicators, as well as track related incidents. Monitoring quality and patient safety reduces the possibilities of these penalties occurring, lowers the cost of care delivery, and improves patient satisfaction.

Information Builders helps organizations transform data into business value. Our business intelligence, integration, and data integrity solutions enable smarter decision-making, strengthen customer relationships, improve performance, and drive growth.

Our Quality and Patient Safety Insights App, part of the Omni-HealthData™ Insights Suite, provides executive, departmental, and operational views of more than 150 core measures and 180 patient safety events, highlighting areas of performance improvement across a

¹ "Hospitals Face Record Penalties as CMS Expands Criteria for Readmissions Fines," Modern Healthcare, August 2016.

² Haefner, Morgan. "769 Hospitals See Medicare Payments Cut Over High HAC Rates: 7 Things to Know," Becker's Hospital Review, December 2016.

³ Muhlestein, David. "Assessment of the Hospital Value-Based Purchasing Program: Current Opportunities for Improvement," Leavitt Partners, November 2015.

variety of service lines. The information is used to perform root cause analysis and inform hospital leadership tasked with performance improvement. All levels of insight include complete drill-up, drill-down, and drill-through capabilities.

Metrics and Measures

Those tasked with performance improvement can closely monitor metrics and measures in the following categories:

- Quality Core Measures. Providing more than 150 clinical measures by measure category, facility, discharge station, attending physician, surgeon, or surgeon specialty, with the ability to identify specific patient cases for further investigation
- Quality Infections. Monitors infections related to SSIs, CDiff, and MRSA. Infection rates can also be viewed by hospital, department, procedure, surgeon, and discharge date
- Quality Oncology. Offers measures related to cancer patients, including volumes, ALOS, readmissions, and mortality
- Quality Outcomes. Provides outcome data, such as ALOS, mortality, and readmissions by hospital, CMS populations, payer group, APR-DGR, and trauma flag. Volumes, length of stay, and case mix index for hospitals and individual service lines can also be analyzed
- Quality Patient Safety Indicators. Tracks 180 Patient Safety Indicators, including PSI90 by hospital, surgeon specialty, surgeon, and payer group using AHRQ methodology
- Quality Women and Children. Monitors the number of ectopic pregnancies, deliveries, hysterectomies, episiotomies, and birth-related safety indicators by time period, with the ability to drill down to individual patient cases

Users

- Quality Staff
- Network Performance Teams
- Nurse Management
- Clinical Analysts
- Department Heads
- Infection Control
- Risk Management

Features

The Quality and Patient Safety Insights App collects, unifies, and harmonizes data from a variety of internal and external sources, then presents it through a series of executive, departmental, and operational dashboards, with drill-through capabilities that allow stakeholders to:

- Track incident rates by location or event type
- Monitor more than 180 event types, including adverse drug reactions, falls, diagnoses and treatments, and medications and fluids
- Chart quality and safety data to uncover patterns, trends, and correlations
- Drill down to detailed data, including individual patient cases

Benefits/Improvements

- Rapidly uncover issues, and understand their root causes or contributing factors down to patient level
- Obtain a holistic view of care quality by combining AHRQ patient safety indicators with information from other sources, including the EMR
- Create a culture of measurement and improvement by ensuring that all stakeholders are using the same consolidated, timely view of critical metrics to support quality and patient safety initiatives
- Improve HEDIS Score and Star Ratings, while lowering the incidents of HACs, Readmits, and VBP penalties
- Identify the true cost of an event
- Correlate patient safety events with staffing levels

Data Sources

- Hospital EMR and Billing Data
- Timekeeping/Payroll Data
- Core Measures/Premier
- NHSN Infection Control Database
- Patient Safety Indicators
- Quintile Stroke Measures
- Tumor Registry
- Trauma Registry
- Cardiac/Obstetrics Registries
- NICU Registry
- Industry Benchmarks
- Mastered Physician/Practice Data

Omni-HealthData™ Insights

Information Builders and St. Luke's University Health Network have joined forces to create Omni-HealthData™ Insights, a suite of out-of-the-box applications that help hospitals and other care providers to leverage data assets across the continuum of care to achieve their strategic priorities. St. Luke's is a six-time Truven Top 100 Award winner, HIMSS Stage 7, and CMS Four-Star Rated IDN.
